

Roto Object Business

Certainty in planning and implementing
customised solutions

Roto Object Business

Certainty in planning and implementing customised solutions

Technically and aesthetically demanding project implementation requires innovative window and facade element solutions.

Through our Roto Object Business service we can provide you with hardware solutions with which to implement your ideas.

For particularly large, energy efficient aluminium windows and doors, for which standard components do not fit, we develop economically viable and tailored solutions, paying attention to maximum operating convenience, appealing aesthetics and the highest security standards.

Our Roto Object Business service provides you with the appropriate support to master technical challenges.

The Roto Object Business experts are your reliable partners for project-specific window and door technology inquiries.

When standard products are not sufficient, we design customised, high-quality aluminium window and door solutions tailored to your individual requirements.

Our staff will be on-site to support you, whenever and wherever you need us.

Our promise

Reliable and economical solutions for your project through an individually tailored range of services:

- Technical support and solution concepts
- Effective prototyping
- Efficient validation and certification
- Individualised production assistance

Our approach
Achieving visions together

Contact our Roto Object Business team of experts and we will come to the site to get a first-hand assessment of your construction project.

Technical support and solution concepts

Quick and reliable project feasibility statements

Rapid response times during project planning are critical for a successful project outcome. You will receive prompt and definitive statements about your project's technical feasibility.

You will save time. We will clarify any open hardware issues, check your requirements, and subsequent to approval, design either standard or customised solutions for your project.

With our extensive network in the facade and system industries, we can also provide timely access to experienced and expert specialists.

Scope of service:

- Quick and reliable statements on technical feasibility
- Design of standard and customised solutions
- Clarification of outstanding issues, especially for customized applications
- Extensive network of experienced specialists

Effective prototyping

Visualisation of design concepts through in-house prototyping

The visualisation of the preferred hardware solution accelerates the design process, and facilitates prototype optimising opportunities for the subsequent product. That is why we use 3D printing for rapid sample production of standard and customised components.

We will personally accompany you during the installation of the mock-up on-site. This gives you the opportunity to test ease of use and to suggest improvements.

Our distinctive colour concept allows you and your customers to increase your customisation options because we can implement the precise shade of your preferred colours.

Scope of service:

- Samples of standard and custom solutions created quickly and efficiently
- Implementation of optimisation requests on short notice
- Support with the creation of sample elements on-site
- Implementation of colour preferences

Efficient testing and certification

Validation of functionality through the Roto ITC test centre

Our in-house certified Roto ITC test centre shortens the decision-making process. Save time and money through faster scheduling and flexible testing of project solutions.

Leave the detailed system validation to us. We will test and certify all solutions according to national and international standards and regulations.

We can provide you with hardware function protection through your individualised project warranty extensions.

Scope of service:

- Window and hardware testing in the Roto ITC in-house certified test centre
- Testing and certification of project solutions
- Compliance with national and international standards
- Individualised warranty extensions

Individualised production assistance

Accelerated production start-up and efficient processing

Together, we will design a tailored logistics concept for you. Short delivery times, customer-specific labeling, and packaging, enable lean process implementation, and provides assurance in planning.

For smooth project development and faster optimisation, we provide on-site support with our experience and expertise from the initial production stages.

You will receive a supporting project manual with all of the hardware information relevant to your project.

Our competent after-sales service includes personalised consultation and the provision of replacement parts, even after project completion.

Scope of service:

- On-site support during the initial stages of production
- Adjustment of the flow of material and goods to the project
- Project-specific documentation
- Competent after-sales and parts service
