

Press release

Date: 4th January 2021

Another testimonial for the “Roto Patio Inowa” hardware product range / Used in the new Rehau “Synego Slide” sliding system / “Smart” qualities in all areas / Tightly sealed, convenient and aesthetic / Concealed technology / Delicate locking components with cover caps

Roto impresses with “intelligent” hardware

Leinfelden-Echterdingen – The “smart” advantages of the “Roto Patio Inowa” hardware product range have won over another renowned producer of PVC profiles. As the window and door technology specialist reports, the series is now also being used in the new “Synego Slide” retraction sliding system from Rehau. The French manufacturer sees great market potential for the design, which with a depth of 80 mm is suitable for elements up to 4 m wide and 2.6 m high.

According to Roto, the “intelligent” hardware demonstrates its qualities in several areas at the same time. For instance, the special closing movement of the sash transverse to the frame profile, the circumferential gaskets and the active locking points in the mullion ensure that the system remains tightly sealed at all times, even in extreme weather conditions. The system’s “particular strengths” also include the simple and therefore convenient operation and the positive design attributes.

The concealed technology of “Patio Inowa” makes narrow frame profiles possible. The components installed concealed in the profile are not visible from outside when the sash is closed. Even when the element is open, the visual harmony is fully maintained thanks to delicate mullion strikers with cover caps. The producer also explains that the hardware components do not protrude into the open frame.

The window and door technology specialist reports that the “Roto Patio Inowa” hardware product range is now also proving its strengths with regard to sealing, operating convenience and design in the new “Synego Slide” system from Rehau. The invisible technology installed concealed in the profile of the sliding system also plays a part in this. The photo shows a mullion locking component.
